

Body-Temp. Detection System

1) System introduction

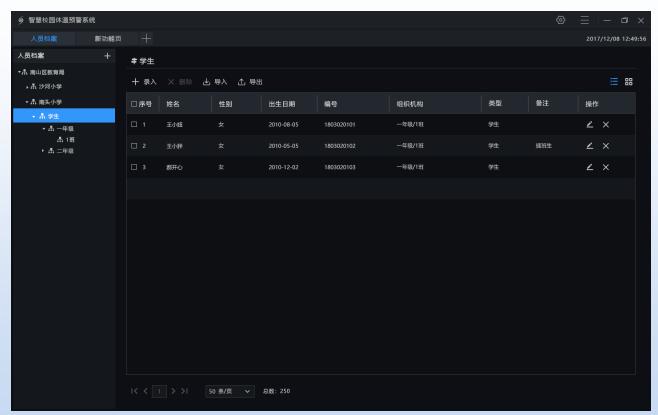

2) Body Tem. Detection camera

Real Time Detection

Personnel File

Pre-warning Management

2) System introduction

1) Body Tem. Detection camera

Stylish Design

Model: SN-T5

Features: Temp. detection accuracy≤0.3 °C

Temp. detection Target up to 16

Response time ≤30ms

Temp. detection distance ≤10m

Dual vision, Two channels, One IP

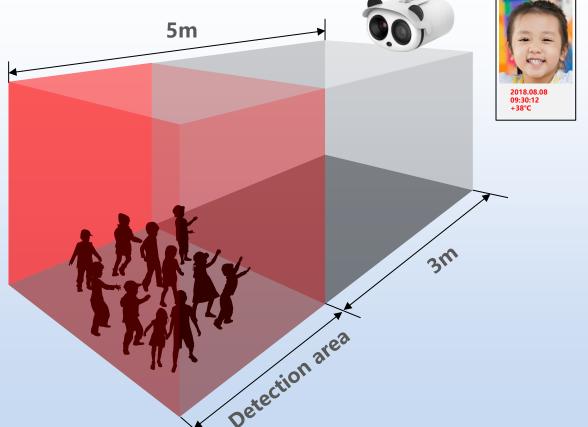

Dual vision, two channels, realize face detection with temp. detection simultaneously and overlay the temp. on the face

Remote Temp. detection

Body temp. detection

Multi-target quick temp. detection

Intelligent body temp. detection

16 target temp. detection in 30ms

Real time temp. detection for 16 targets simultaneously

Dynamic real-time continuously detect

Intelligent automatic temp. detection

Traditional body temp. detetion

Finish temp. detection for 16 target in 16s

Temp. detection for only 1 target once

Arrange irregular detection

Manual temp. detection

High accuracy body temp. detection

In house temp. conversion algorithm

to convert human body surface temp. to body temp.

In house temp. correction algorithm

Eliminate temp. drift caused by environment, distance, etc., ensure the camera work stably and reliably for long time

Accuracy≤0.3 °C

Accuracy≤0.3 °C (Emissivity, distance, environment temp. setting, etc.

Face tracking

Embedded face detection algorithm, accurately locate the temp. to the target face

Over temp. real time alarm

Alarm I/O

2 In/2 Out alarm; External buzzer and alarm light supported

Over temp. alarm

When detected over temp. trigger the alarm

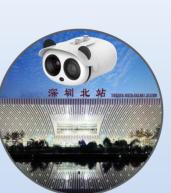

Application

Custom

Train station

Hospital
